

WEB DEVELOPMENT ASSIGNMENT

Problems Experienced and Improvement Report

1. Introduction

This report discusses the problems I experienced while completing Part 1 of my Web Development assignment. It also explains the feedback I received from my lecturer and the steps I will take to improve my website for Part 2.

The main feedback I received was that my Home page was not linked correctly. I was also advised to make time for a consultation so that I could identify and correct my mistakes and improve my work for Part 2.

2. Problems Experienced in Part 1

During Part 1 of the assignment, I experienced several challenges while developing my website.

2.1 Home Page Link Problem

The main problem identified in my feedback was that my Home page was not linked correctly. This meant that the navigation between the pages of my website was not working as expected.

The problem could have been caused by an incorrect file path, an incorrect link name, or the pages not being connected properly. This affected the navigation and made it difficult for users to return to the Home page.

2.2 Difficulty with Website Navigation

I also experienced difficulties when connecting different pages together. Creating links between pages requires the correct file names and paths. A small mistake in the link can prevent a page from opening correctly.

This showed me that I need to test all navigation links before submitting my assignment.

2.3 Limited Testing

Another problem was that I did not test every part of the website thoroughly before submitting Part 1. If I had tested the Home page link and other navigation links more carefully, I may have identified the problem before submission.

I learned that testing is an important part of website development because it helps identify errors before the website is submitted or used by users.

2.4 Need for Consultation

The feedback also advised me to make time for consultation. I realised that asking for assistance when I experience difficulties can help me understand my mistakes and improve my work.

For Part 2, I will make use of consultation opportunities to get guidance and confirm that my website meets the assignment requirements.

3. Lecturer Feedback

The overall feedback I received was:

“Your Home page is not linked correctly. Make time for consultation so you can fix your mistakes and improve for Part 2.”

This feedback helped me identify an important technical problem in my Part 1 website. It also showed me that I need to review my work more carefully and ask for help when necessary.

4. Improvements for Part 2

For Part 2, I will make the following improvements:

- Correct the Home page link and check that it works properly.
- Test all navigation links between the pages.
- Check that all file names and paths are correct.
- Test the website before submitting it.
- Use consultation sessions to get assistance with problems I cannot solve.
- Review the assignment requirements before completing each section.
- Check the website on different screen sizes where possible.
- Make sure the final website is organised and easy to navigate.

5. Lessons Learned

The main lesson I learned from Part 1 is that completing the website is not enough; I also need to test it carefully. A website may look correct but still contain technical problems, such as broken links.

I also learned that feedback is useful because it helps me identify areas that need improvement. In Part 2, I will use the feedback from Part 1 to improve the quality and functionality of my website.

6. Conclusion

In conclusion, the main problem identified in my Part 1 assignment was that the Home page was not linked correctly. I also identified the need to improve my testing and make better use of consultation opportunities.

For Part 2, I will correct the navigation problem, test my website thoroughly, and use the feedback from my lecturer to improve my work. These improvements will help me create a website that is more functional, organised and user-friendly.
